JATIYA KABI KAZI NAZRUL ISLAM UNIVERSITY, TRISHAL
DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Date: 04.09.2025

1. **Name of the student:** SADMAN ISHTIAK
   Roll No.: 22102009
   Session: 2021-2022

   Name of the student: MD. JAHID HASSAN KHAN ORNOB
   Roll No.: 22102035
   Session: 2021-2022

2. **Program:** B.Sc. (Engineering)
   Proposal for: Project

3. **Name of the Proposed Supervisor:** DR. MST. JANNATUL FERDOUS
   Designation: Professor

4. **Date of First Enrolment in the Program:** 17.08.2025

5. **Tentative Title:** "InternNova: A Smart Internship and Career Finder"

6. **Background and present state of the problem:** In Bangladesh, employers are moving from a degree-based to a skills-based approach in hiring. However, many important skills—such as AI, data analysis, cloud computing, cyber security, green technologies, and problem-solving—are not fully taught in traditional education. The fast growth of technology and industry is much quicker than the changes in university courses.

   Because of this, students often try to learn new skills on their own to improve job chances. Still, many are unsure which skills are most useful. At the same time, companies in Bangladesh, especially startups, want candidates who can show real experience. Even for internships or entry-level jobs, prior skills or project work are often required.

   Unfortunately, there is no dedicated website or platform in Bangladesh focused only on internships. Most students depend on general job sites, social media posts, or personal networks, which makes it harder to find structured internship opportunities. Since universities also do not always provide practical training or internships, there is a strong need for a platform where students and young professionals can show their skills and projects directly to employers. This would help employers find capable candidates and give students fairer access to opportunities.

7. Objectives with specific aims and possible outcome:

Objectives:

- To design and develop a web-based platform that connects employers with candidates based on verified niche skills
- To provide students and self-learners with a space to showcase their practical competencies, projects, and achievements
- To enable companies to post skill-based requirements and efficiently identify suitable candidates beyond traditional degree filters
- To reduce the gap between industry demand and academic preparation by offering a skills-focused matching mechanism
- To enhance transparency in recruitment by introducing evidence-based skill verification (e.g., portfolios, certifications, or assessments)
- To ensure scalability, security, and data protection for both candidates and employers

Outcomes:

- A functional website where companies can search, filter, and shortlist candidates based on specific skills
- An accessible platform for students and early-career professionals to demonstrate their expertise and attract relevant opportunities
- Improved visibility of emerging skill trends for both employers and learners
- Reduced hiring friction for startups and organizations struggling to find candidates with specialized abilities
- Increased opportunities for self-taught or non-traditionally educated individuals to gain internships, entry-level positions, or freelance work
- A secure and reliable system ensuring data privacy, trust, and transparency in recruitment processes

Outline of Methodology/ Experimental Design:

The project will be developed as a web-based platform using the MERN stack (MongoDB, Express.js, React.js, Node.js). A user-friendly interface will allow students and employers to interact with the system. User authentication and role-based access control (RBAC) will ensure secure operations. MongoDB will store user profiles, job postings, and applications. The platform will include features for profile creation, opportunity posting, and skill-based matching. Testing will cover both functional and system-level requirements to ensure accuracy and usability. The application will be deployed on a cloud hosting service for accessibility and scalability.
